

HOW TO INSTALL EXPRESS WILLS ACROSS A NETWORK

This type of installation allows you to share client files and **Express Wills** Units between the computers in your network. It is best to have the program loaded onto each machine and have the files and databases shared on a server drive. This can be achieved as follows:

Install the program onto the server using the single user instructions, changing the destination folder and/or drive letter if necessary.

Using the CD-ROM, install the program to each machine using the single user instructions.

Then, on each workstation go into **Express Wills**, and click on Set Product Path under File on the Menu Bar.

Change the destination of both Document & Database paths, to the location of the samwills\files folder on the server.

Change the destination of the Knowledge Base & Charity Database paths to the samwills\data folder on the server.

Express Wills is now ready to use, with the Document Unit stock, and Client Files being shared across all machines. Once it has been launched on your computer the 'View getting started' option, will provide you with assistance and guidance on using **Express Wills**.
